

Landing & Car Operation Panels

These panels are made of designer stainless steel plates with illuminated round, square and elliptical buttons operated by micro switches with long life and sure make break of contacts. All these panels have seven segment displays with options of LED/LCD/Dot matrix scrolling/clock and temperature display. As an optional extra features emergency light and two way communication systems can also be incorporated in the car operating panel. Bellow in photographs you can see the different fixtures of landing & car operating panels with three code numbers to order for.
